

REGION TWO SCHOOL SCOUTING 09

COLUMBAN COLLEGE

The next batch for school scouting was in Columban College in Olangapo City with Ms. Karren Cabanban and Mr. Anderson Angeles. We were assisted by Mr. Alben Alqueza, the IIEE Student Chapter President in CC, and Mr. Ricky James Mendoza, the Student Council President of the College of Engineering. We first had the ocular inspection in Columban College (Barreto Branch) only the Gymnasium where they can hold their activities. Engineering building is the largest building among other college departments. Electrical students here do not have their own laboratory where they can practice their course.

After the inspection, we went to Columban College, Olangapo City (main branch) which is a 20-minute ride from Barreto Branch to meet the other officers. We stated the purpose of this activity and announced the upcoming activities of Region Two especially the Regional Student Convention. We had a serious talk about some matter regarding affiliation, raising budget,

current state of their membership and so on. Mr. Alben raised some question about the RSCon because they had not joined any event in the region in the previous years. We had also checked the place and since this was the main branch their facilities and equipments are located here.

Before adjourning the meeting, they promised that they will join the forthcoming RSCon and other proposed activities of the region two.

Based on some indication Columban College is not yet ready to hold RSCON.

BATAAN PENINSULA STATE UNIVERSITY

BPSU was one of the largest members in R2. They had their EE Sportsfest when we had the scouting and almost all of the EE students were present in this affair. Mr. Christopher Malonzo, the IIEE Student Chapter President of BPSU, gave us a warm welcome despite of his busy schedule. They gave us the time to tell the purpose of school scouting together with their officers and other members.

First, we expressed our gratitude for their participation in the recent Basketball Tournament and Seminar in Tarlac City. They were also thankful because according to

them, they learned more in the seminar and enjoyed it as well. During the meeting, questions were raised regarding membership forms and benefits of IIEE. They promised to be active and open to help in the development of region two accompanied with right dissemination of information.

After the meeting, Mr. Malonzo assisted us in the whole vicinity of the school. They had their EE laboratory, mini theater where they can hold seminars, one computer room, and a library. The Engineering Building is isolated from other buildings. BPSU had a

quite large area but since they had many students it looks populated.

We left BPSU with the hope of achieving our objectives for the betterment of the region.
